Nextuple
Andover, MA, US

Job Application for Intern - Software Engineer

About Me

I am a Computer Science graduate student at the University of Utah, Salt Lake City, Utah, and I am looking for summer internship positions. I have over three years of experience as a full-stack developer and have advanced knowledge of JavaScript, HTML5, CSS, and frameworks like AngularJS and React. Also, I have gained an understanding of microservice architecture, SQL, Graph QL, Spring, Hazelcast, Cassandra, and Kafka. Moreover, I have experience working with Java, Elasticsearch, C, and ASP Core MVC applications. Having worked in Expicient, Sapient, and Blue Yonder on Order Management Systems, I have gained experience in eCommerce and agile methodologies. Also, through the coursework, I have learned visualization using Python, Matplotlib, and Pandas.

Why Nextuple?

Nextuple offers challenging opportunities to work on SaaS products and the eCommerce domain to gain real-world experience and work in a startup culture. Also, it leverages machine learning and data visualization to serve the customers. Moreover, the workplace culture where ideas are welcomed from every corner is the best place to develop my skills and expand my experience.

Why Me?

I have a strong passion for learning new technologies and applying them in practice to bring the best out of the products. I can adapt to any environment, bringing my experience working at a startup to the table. Also, as I have experience working on order management systems and converting business requirements into a technical solution, I would be a better fit. Having an open mind, I embrace the technology change and learn them quickly and contribute to the team whenever needed.

Sincerely,

Santhosh Natarajappa
